

# Snelling Engineering

## HAS MOVED

After purchasing J. Murphy Sheetmetal two years ago Snelling Engineering has diversified and expanded the type of work it conducts. This has seen Snelling Engineering replace and upgrade existing equipment along with the purchase of additional equipment. Staffing levels have also grown from two employees to a team of eight highly motivated, experienced and professional individuals.

The diversity of their work, the addition to their staffing levels and their planned further expansion to plant and equipment has made it necessary to relocate the business to larger premises at **29 Telford Drive Shepparton.**

The additional staff and equipment has enabled Snelling Engineering to do a whole lot more than just cutting and folding. Even though they still consider themselves the cutting and folding specialists, they can also offer a full engineering fabrication and material processing service.

“Professional advice, excellent quality, cost competitive, superior service, is what we pride ourselves on” ,

said Steve Snelling, managing director of Snelling Engineering. “We believe we cater for a broad range of engineering fabrication, material processing and steel supply requirements, from small jobbing work and repairs to large project work and on-site installations, along with off cuts of material to full sheets.”

Some of Snelling Engineering’s services include aluminium, stainless steel and general fabrication, on-site maintenance and installations, guillotining, pressing, punching, rolling, and steel supplies, so call in and see the team at Snelling Engineering at their new location, 29 Telford Drive, Shepparton, and give them the opportunity to service your engineering and steel supply requirements.
